

The Ladder-Leg Directions

Advantages of the Ladder-Leg attachment:

Absolutely no more blocking, digging holes, or the annoyance of constantly readjusting ladder levelers. Simply attach the Ladder-Leg to any extension ladder, and go.

The Ladder-Leg is not dedicated to any one ladder. It can be taken off one ladder, and installed on another in seconds, without the need to modify the ladder.

The advantages of the Ladder-Leg attachment are endless on the job site. After using the Ladder-Leg, you'll want one for every ladder.

Extension Ladder Safety:

Follow all ladder manufacturer's guidelines for safety and use.

Additional Ladder-Leg Safety:

For use on sound aluminum and fiberglass ladders, with a duty rating of 1, or higher. Any ladder less than a 1 for duty rating, has too much flex/twist. Not to be used on wooden ladders.

Directions For attaching the Ladder-Leg to ladder:

With ladder standing in vertical position, slide Ladder-Leg attachment under bottom rung of ladder, until bottom rung is in channel. Roughly center Ladder-Leg attachment on the rung of ladder. While footing the Ladder-Leg attachment, cantilever the attachment up. Hook the J-bolt over the next rung, and tighten the wing nut.

Directions For Use of Ladder-Leg:

Clear debris (dirt, sand, stones, etc.) where the ladder will be placed. Approach the ladder squarely, stepping on the Ladder-Leg attachments step. This sets the foot. The next rung up, your foot should favor the center of the rung. Use the same corresponding hand for grabbing. Example: Left Foot/Left Hand, Right Foot/Right Hand. After that, go up the ladder as always. Always use attachments step first, and last, when getting on, and off the ladder.

CAUTION: Do Not bypass the Ladder-Leg attachments step. This could result in loss of control of ladder, causing property damage, and/or bodily injury.

Use of Anti-Spin tube:

When extending the ladder using a rope, slide the provided dowel into the Anti-Spin tube. Let the dowel come out against your leg while footing the ladder. This will prevent the ladder from spinning while pulling on the rope.

CAUTION: To prevent tripping, Remove the dowel after extending ladder. For additional ladder stability, the use of a ladder stand off is recommended.
